

UNIVERSITY COLLEGE
OF ESTATE MANAGEMENT

BSc Quantity Surveying

Programme Specification

Academic year September 2015 to August 2016

Summary Programme Details

Final Award	
Award:	BSc (Hons)
Title of (final) Programme	Quantity Surveying
Credit points:	360
Level of award (QAA FHEQ):	6
Intermediate award(s)	
Intermediate award 1:	Diploma of Higher Education
Credit points:	240
Level of award (QAA FHEQ):	5
Intermediate award 2:	Certificate of Higher Education
Credit points:	120
Level of award (QAA FHEQ):	4
Validation	
Validating institution:	University College of Estate Management (UCEM)
Faculty	Construction
Date of last validation:	March 2013
Date of next periodic review:	March 2018
Professional accreditation	
Accrediting body:	Royal Institution of Chartered Surveyors (RICS)
Date of last programme accreditation:	November 2015
Date of next periodic review:	At next partnership meeting, due Academic Year 2016/17
Accrediting body:	The Chartered Institute of Building (CIOB)
Date of last accreditation:	October 2014
Date of next periodic review:	October 2019
Accrediting body:	Chartered Association of Building Engineers (CABE)
Date of last accreditation:	August 2015
Date of next periodic review:	August 2020
Miscellaneous	
QAA benchmark statement	Construction, property and surveying (2008)
Date of commencement of first delivery	September 2013
Duration	4 to 4.5 years (standard route) or 3 years (accelerated route). 4 years if taken as part of an apprenticeship programme.
Maximum period of registration	12 years
UCAS Code	K240
Programme Code	UBSCQSS/UBSCQSF/ UBSCQSA
Other coding as required	n/a

Programme Overview

Rationale

This programme provides students with a rigorous understanding of the principles and practices involved in a quantity surveying role applicable to an international context up to Bachelor's degree standard.

The programme provides the academic underpinning necessary to prepare students for a career as a professional surveyor recognised by RICS, and/or other related international professional bodies.

The programme is primarily designed for people employed in a quantity surveying role, such as in a private QS practice, construction company, building contractor or government organisation. Such employment is not mandatory, but is desirable.

- The student can enrich their CV with a degree accredited by RICS, CABE and CIOB.
- Develop skills in quantity surveying, cost consultancy, project management, estimating and facilities management.
- Study the leading programme in this subject area, which allows the student to combine work and study through supported online learning.

Entry requirements

Entrants to this programme normally are required to have obtained:

- 230 UCAS tariff points or an equivalent level of attainment through recognised qualifications not included in the UCAS tariff.
- Grade C or above in English and Mathematics at GCSE or equivalent recognised qualifications.
- International Students English Language Requirements:

All UCEM programmes are taught and assessed in English. The student will therefore be required to demonstrate adequate proficiency in the language before being admitted to a course:

- Grade C or above in English (Language or Literature) at GCSE or its equivalent.
- Grade 6.0 or above, with at least 5.5 in the reading and writing modules, in the International English Language Testing System (IELTS) test administered by the British Council in the Social Sciences academic module.
- 79 or above in the Internet option, 213 or above in the computer-based option or 550 or above in the paper-based option, of the Teaching of English as a Foreign Language (TOEFL) test.
- Grade C or above in Use of English at A/S Level.

Recognised qualifications having an equivalent level of attainment as those recognised by UCAS include: HND/HNCs, professional qualifications from recognised institutions, certain armed forces qualifications and partially completed degrees. There are also a wide range of international qualifications that are deemed to have UCAS point equivalent values.

BSc (Hons) Quantity Surveying Programme Specification

Applications are assessed in accordance with the UCEM Code of Practice Admissions and Recognition of Prior Learning.

Students may apply to enter the Programme in either semester.

Recognition of prior learning (RPL) or recognition of prior experiential learning (RPEL) routes into the Programme

UCEM policy and procedures for Recognition of Prior Experiential Learning (RPEL) and Recognition of Prior Certificated Learning (RPCL) are set out in UCEM's Code of Practice: Admission and Recognition of Prior Learning. This policy statement takes precedence in any such decision.

RPEL may be used for admission onto an undergraduate programme in accordance with the entry requirements stated in the section above.

UCEM also recognises credit awarded by higher education degree awarding bodies in accordance with the relevant higher education qualifications framework and allows that credit to count towards module exemption from an undergraduate programme.

Normally the maximum credit for prior learning that can be counted towards a programme is 66% (two thirds). RPEL and RPCL do not enable the transfer of credit/exemption from classification modules.

Programme progression

Successful completion of the BSc may enable the student to progress onto one of our MSc programmes.

Award Regulations

For details of the award, please view the [Undergraduate Programme Assessment, Progression and Award Regulations](#) and the [Academic and General Regulations for Students](#).

Career prospects

A diverse career opportunity is available for students to pursue after completing this programme. Students typically find employment in the private sector for instance consultancy firms, contracting companies involved in both building, M & E and civil engineering projects and developers. Opportunities can also be found in the public sector such as local and central government or other public sector organisations. Practising as self-employed consultants is also an option.

In addition, students are not confined to working in their local construction industries as international career mobility could also be attained.

The following provide a range of the types of work that students undertake after completing this programme:

Cost management

- Cost consultancy, project management, contractor surveying, building services

BSc (Hons) Quantity Surveying Programme Specification

quantity surveying and facilities management.

- Preparing feasibility estimates and contract documents and providing advice on design economics, tendering and procurement strategies.
- Cost planning and whole life costing.
- Cost and financial control from design to completion and occupation.

Building construction and surveying

- Managing restoration and conservation of old buildings and managing constructing of new ones.
- Managing repairs and maintenance, building pathology and remedial action.
- Advising on building law, regulations and control, health and safety legislation (hazardous materials) and environmental matters.

Finance, investment and development

- Advising on development, land purchase or compensation for compulsory purchase.
- Financial aspects of real estate, including the sale, purchase and portfolio management of investment property and the financing of real estate projects.
- Working with and understanding the roles of bankers, accountants, developers and major institutional investors in real estate.

Planning & Development

- Advising on economics, amenities, conservation and urban renewal schemes.
- Working with planners to implement plans within a given timescale and budget.

Programme Aims

Programme aims

UCEM's BSc (Hons) in Quantity Surveying provides students with a rigorous understanding of the principles and practices involved in a quantity surveying role up to first degree level standard. The programme reflects the academic underpinning necessary to prepare students for a career as a professional surveyor recognised by the Royal Institution of Chartered Surveyors (RICS), or other related international professional bodies. It provides students with a progressive development of knowledge and skills over three stages of study.

The programme is designed to ensure that graduates have a stimulating and challenging education, which prepares them well for their professional career and to produce capable individuals with the potential to progress to professional status and prepare for advancement to Masters level study both in the UK and overseas. Students will develop a broad range of skills which are transferable across other industries.

BSc (Hons) Quantity Surveying Programme Specification

Market and internationalisation

This programme is aimed at a UK and broad international audience; however, it has as its basis UK law and regulatory controls. The programme aims to utilise international case studies to further understanding and where possible, international construction and surveying is considered along with international codes and conventions.

Learning Outcomes

Having successfully completed the programme, the student will have met the following learning outcomes.

	Level 6	Relevant modules
A – Knowledge and understanding	<p>A1. The technical, financial and contractual concepts, theories and principles associated with the procurement, production, refurbishment, maintenance and disposal of construction projects.</p> <p>A2. The business environment including the political, economic, legal, social, technological, cultural, health and safety, sustainability and global influences which affect the construction processes and within which construction and client organisations operate.</p> <p>A3. The role of quantity surveyors in the procurement, development and production of construction projects.</p> <p>A4. The roles, linkages and interdisciplinary relationships of the various stakeholders involved in the procurement, development and production of construction projects.</p> <p>A5. The contemporary issues facing the quantity surveying profession.</p> <p>A6. Professional ethics, their impact on the operation of the quantity surveying profession and their influence on the society; communities and the stakeholders with whom they have contact.</p> <p>A7. Research methods and their relative strengths and weaknesses.</p>	See Curriculum Map
B – Intellectual skills	<p>B1. Evaluate critically relevant theoretical frameworks and practical issues.</p> <p>B2. Integrate theory and practice to solve problems.</p> <p>B3. Define, investigate and analyse problems and</p>	

BSc (Hons) Quantity Surveying Programme Specification

	<p>apply judgement to devise solutions.</p> <p>B4. Work effectively and independently to develop intellectual curiosity consistent with the level of study.</p> <p>B5. Communicate effectively, clearly and concisely at an appropriate academic level on programme related issues.</p> <p>B6. Evaluate the appropriateness of various methods of knowledge acquisition and select appropriate methods to solve problems.</p> <p>B7. Assess a range of resources including contemporary sources, draw on evidence to reflect and evaluate competing explanations to provide appropriate conclusions.</p>	
<p>C – Subject practical skills</p>	<p>C1. Provide basic but appropriate advice to the different stakeholders in construction projects guided by professional ethical framework to meet their project and business objectives.</p> <p>C2. Undertake various pre and post contract quantity surveying procedures and processes in construction projects.</p> <p>C3. Appreciate the techniques in pre and post contract risk, value, cost and financial management.</p> <p>C4. Assess the methods to be used when resolving disputes under construction contracts.</p> <p>C5. Communicate clearly and concisely at a professional level.</p> <p>C6. Locate information sources; and assemble and present information in a variety of contexts.</p> <p>C7. Assess the validity of a range of published research consistent with the level of study.</p>	
<p>D – Key / Transferable skills</p>	<p>D1. Select and use appropriate range of numerical approaches for calculating, checking and presenting solutions to problems.</p> <p>D2. Select and apply the necessary range of ICT applications for preparing and presenting information.</p> <p>D3. Source material and knowledge from a variety of resources and effectively judge what can be integrated and applied.</p> <p>D4. Be self-motivated.</p> <p>D5. Effectively and efficiently manage time.</p> <p>D6. Attain and apply research skills consistent with the level of study.</p>	

BSc (Hons) Quantity Surveying Programme Specification

Curriculum Map

This table indicates which study units assume responsibility for delivering (X) and summatively assessing (A) particular programme learning outcomes.

Level	STUDY MODULE/UNIT	A1	A2	A3	A4	A5	A6	A7	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	C5	C6	C7	D1	D2	D3	D4	D5	D6	D7

Module Summaries

CORE MODULES

Building Economics

This module aims to provide students with an appreciation of construction costs and their control from inception to completion of a project. It provides students with an understanding of the concept of value and its relationship with development opportunities. It then considers what affects the cost of a building and how the costs of the development can be controlled, both at the pre-contract and the post contract stages. The application of the RICS New Rules of Measurement (NRM) is considered when undertaking pre-contract cost control activities and Building Information Modelling (BIM) is used to allow an appreciation of this method. The importance of life cycle costs and the maintenance management of a building are also considered.

Building, Environment, Technology and Complex Projects

This module develops students' knowledge of the theory and practice of building, environment and technology for complex projects. It comprises the following topics: advanced construction techniques; technology/process innovation and development; components; building services; civil engineering; sustainability; legislation; building regulation; contaminated land; works incorporating existing buildings; (complex sites).

It includes consideration of a range of complexities due to the site, the environment, construction or unusual situations.

BSc (Hons) Quantity Surveying Programme Specification

Building, Environment, Technology and Framed Structures

This module provides an introduction to building, environment and technology based on framed or similar construction. Topics covered include: the theory and principles of framed structures; components; design; construction techniques; construction; simple services; pathology/surveys; maintenance, sustainability; legislation and fire safety.

Examples of framed buildings are included, such as steel, reinforced concrete and timber construction applicable to buildings with different types of usage such as commercial, industrial and residential. Perspectives such as sustainability are also considered.

Building, Environment, Technology and Simple Construction

This module provides an introduction to building, environment and technology based on simple construction, establishing a foundation of knowledge and understanding to be developed in later modules. It develops students' communication skills, enabling them to describe simple construction in a professional manner.

Simple building examples are included, such as traditional masonry construction and roof construction typical in buildings of up to three storeys. Perspectives such as sustainability are considered.

Construction Law

This module aims to provide students with an understanding of the major issues of law embraced by construction projects. It enables students to analyse professional liability and evaluate methods of extending/limiting liability, and to assess the extent of liability outside the contractual relationship. The module also aims to give students an in-depth understanding of the issues related to construction disputes and the various commonly used methods of dispute resolution.

Contemporary QS Practice

This module explores a range of issues and challenges which contribute to the development of the quantity surveying profession in the UK and other parts of the world.

The significant changes experienced in the construction industry globally over the past decade meant that quantity surveyors have had to adapt their traditional practices and embrace new philosophies in order to contribute effectively in construction projects.

This module therefore provides an opportunity to develop the knowledge, understanding and skills required to operate in a dynamic and contemporary construction environment.

BSc (Hons) Quantity Surveying Programme Specification

Contract Procedures

This module develops the knowledge gained from contract and tort law to focus on the specific aspects of construction projects where it is common to find standard forms of building contracts.

The purpose of the module is to develop the broader understanding of law and to apply it to common eventualities on construction and building services projects.

This module aims to provide students with the contractual knowledge required to deal on behalf of all parties associated with construction contracts from inception to completion.

Economics

This module provides an introduction to economics and economic reasoning. It comprises the two main divisions of the subject - microeconomics and macroeconomics - as they apply in a typical mixed economy of both private and public sector decision-making. It provides the theoretical and conceptual foundation for property economics including valuation and for construction economics.

Although the focus is on tools, techniques and models, the later applied modules are anticipated both in the study materials and in the assessments by reference to the built environment context.

Economics of Property and Construction

This module covers the application of basic economic theory to the four dimensions of property and construction sector activity: the market dimension, the public policy dimension, the temporal dimension and the spatial dimension. It draws on conventional micro- and macro-economics but also on aspects of managerial economics and economic geography. It encourages recognition of the relevance of economic analysis to property-related issues and facilitates a command of the analytical skills used in property and construction economics.

Estimating and Tendering of Construction Projects

This module focuses on the key aspects of estimating and tendering of construction projects. The module covers the process of cost estimating and the production of key documentation for competitive tendering. It sets out the principles of estimating and tendering, in particular from the contractor's perspective.

It is primarily focused on the costing of construction projects and factors affecting costs of labour, plant and materials and also the profits / overheads mark-ups. The module also focuses on the use of information and communication technologies (ICT) in estimating and tendering and how this is developing in the construction industry.

BSc (Hons) Quantity Surveying Programme Specification

Financial and Resource Management

This module seeks to explain how managers within organisations in the construction, land and estate management industries, in both the public and private sectors, seek to achieve organisational aims by effectively using financial and other resources. People management does feature in this module but the spotlight is on how managers may use non-human resources in the pursuit of corporate goals. The module covers the role of change throughout the organisation as a central theme especially in the sense of changing techniques and organisational objectives. Internal financial control and external financial reporting are distinguished from each other and the essentials of capital investment appraisal and financial decision making are explored.

Legal Studies

This module provides an introduction to the English legal system and covers the law of contract and the law of tort.

This module aims to:

- demonstrate how a valid contract can be formed; the importance of contract clauses; how a contract can be breached and how it can be discharged; the consequences of discharge;
- demonstrate the importance of the law of tort to the construction and property industry, with emphasis on: negligence, occupiers' liability, nuisance and trespass to land;
- establish an analytical approach to legal problem solving.

Measurement and Quantification of Construction Work

This module provides an understanding of the role of the quantity surveyor within the construction team during the tender process. It focuses particularly on the role that the quantity surveyor plays in putting together pricing and tendering documentation and the uses for this documentation throughout a construction project. This module will develop key practical skills in quantifying various elements of construction work from drawings using accepted conventions and appropriate standard methods of measurement.

People and Organisational Management

This module aims to:

- explain the role and function of management within organisations in the construction, land and estate management industries, both public and private sectors;
- explore the question "what is management?" and to distinguish it from leadership;
- consider the role of change as a central theme as organisations seek to come to terms with issues that are constantly impacting, both positively and negatively, on the people, management and the structures of businesses;

BSc (Hons) Quantity Surveying Programme Specification

- consider contemporary organisational behaviour as applied to the relevant sectors of industry.

ELECTIVE MODULES

Commercial Management in Construction

This module explores a range of strategic and operational issues in commercial management of construction experienced by contracting organisations. The dynamic business environment within which contracting organisations operate means that they need to be astute when competing/bidding for work and seeking to sustain their turnover and profit margin whilst enhancing stakeholder value. This module therefore provides an opportunity to develop the knowledge, understanding and skills required to operate in a competitive commercial environment.

Commercial Property Management

The aims of this module are:

- to examine the role that commercial property plays for both an investor and an occupier;
- to examine the management strategies of property owners and how the commercial property manager helps develop and implement these strategies;
- to examine the breadth of responsibilities of the professional commercial property manager at both a strategic and a fundamental level.

Construction Project Management

This module explores a range of strategic and operational issues in construction project management. The construction project manager (CPM) plays a key role at all stages of the construction process for diverse client organisations that operate in a dynamic environment. The fundamental need for clients to enhance value in their construction projects and, increasingly to also engage stakeholders, means that the CPM has a critical contribution to make. This module therefore provides an opportunity to develop the knowledge, understanding and skills required to operate as a CPM in the context of the property and construction industries.

International Construction

This module aims to:

- provide an overview of the global construction market and the different ways in which construction professionals deal with building in particular regions of the world;
- explore the issues related to the management of international joint ventures, including potential problem areas for project managers;

BSc (Hons) Quantity Surveying Programme Specification

- investigate the international players, companies and clients, covering those areas which international construction managers find themselves involved in on a day to day basis;
- integrate theoretical knowledge and understanding with best industrial practice, including health and safety and environmental sustainability.

Maintenance Management

This module aims to:

- provide an overview of the way that maintenance organisations are structured and the needs of that structure to manage the maintenance of buildings;
- develop existing knowledge in building construction, services and materials focusing on the maintenance and the management of buildings in the global environment;
- integrate sustainable technologies and systems within the maintenance of buildings;
- provide a foundation for the maintenance of the historic environment together with conserving that environment for future generations in the international arena.

Project

The aim of this 40 credit module is to enable the student to develop specific research skills and techniques so that they can interrogate issues and situations and resolve problems related to their area of interest. The module gives students an opportunity to apply their skills and knowledge to the resolution of an industry based problem during a prolonged period of independent study. It is anticipated that the module's outcomes will directly enhance career and educational progression by equipping students with relevant analytical skills and techniques to investigate organisational and industry issues.

Work Based Learning Project

This module requires students to demonstrate the relationship between relevant knowledge, skills and techniques acquired through the programme and the study of professional practice as derived from the workplace. Students need to demonstrate and communicate the details of the experience gained, together with an in depth consideration, mapping of the competency requirements and the ethical conduct needed for seeking professional body membership. Further, to build on that experience to develop specific research skills and techniques so that professional practice issues can be interrogated and independent areas of insight can be produced from combining practice and research. All students undertaking this module will be required to arrange an approved Mentor (who will be internal or external to the workplace) and be in relevant employment whilst they are undertaking their studies.

Learning, Teaching and Assessment

Study support

Induction module:

All students are expected to complete the non-credit bearing Induction Module before the Programme commences. The Induction Module is designed to equip students with the skills they need to study at UCEM.

The induction topic about referencing prepares students for the online test in referencing and citation that must be completed and passed prior to commencement of their studies.

The resources within the Induction Module are available to students throughout the duration of their study with UCEM.

Student learning support:

The Programme is delivered via UCEM's Virtual Learning Environment (VLE) and academic teaching and support is provided online giving student's access to UCEM tutors and other students worldwide.

UCEM's 'Student Central' function will act as the main point of contact for students throughout the duration of their programme. In addition, the Programme has a dedicated programme administrator.

The academic team will guide and support students' learning. Furthermore, all students who do not engage with initial assessment or the VLE will receive additional support from the Programme team. Other UCEM administrative teams provide support for coursework, examinations and technical issues including ICT. Each student, wherever their location, will have access to a wealth of library and online materials to support their studies. International students will be supported through international case studies and guest speakers from the region will be invited to UCEM's webinar delivery.

Special Needs support is provided via a dedicated Disability and Wellbeing team at UCEM.

English language support:

English is the common language for all programmes. It is appreciated that some students will need additional support. Therefore, the VLE provides additional resources on developing academic writing skills to help students whose first language is not English.

Personal and professional development:

Students are undertaking vocational courses that are intrinsically linked to the accrediting professional bodies. Students are encouraged and supported to understand the need for the recognition of these bodies and guided as to how to meet the professional membership requirements. More generally, UCEM has a dedicated careers advisor to ensure students have appropriate access to careers education, information, advice and guidance.

Programme Specific support:

Each programme has a Programme Leader, Module Leaders and Module Tutors to support the students throughout their time with the Programme. The UCEM staff are accessible

BSc (Hons) Quantity Surveying Programme Specification

during normal UK working hours, during which they also monitor the 24/7 forums asynchronously and provide encouragement, assistance and necessary tutor and student feedback services. Access to the UCEM e-Library is on a 24/7 basis and UCEM has a full time librarian during normal UK working hours.

Learning & Teaching Strategy

Knowledge and understanding

The teaching, learning and assessment (TLA) strategy for the Programme is guided by and consistent with the College-wide TLA strategy. The approach adopted is learner-centred but supported and guided, as appropriate to supported online learning.

The acquisition of knowledge in the modules of the programme is promoted through the multi-media learning materials provided and is enhanced by synchronous and asynchronous engagement with the students utilising e-learning tools such as webinars as appropriate.

Learning materials include formative self-assessment questions with follow-up feedback. Detailed feedback is also given on tutor-assessed work. Progressively through the Programme, students are encouraged to undertake independent study and enquiry to broaden their knowledge and understanding of the subject.

Self-directed learning and problem solving combined with supervisor consultation in the Level 6 Project module for instance further enhances knowledge and understanding.

Intellectual skills

These skills are developed through interaction with multimedia learning resources and through undertaking student-centred learning activities. This approach is tutor-guided and formative feedback on these skills is given appropriate emphasis.

Coursework varies across the modules but collectively covers skills 1-7.

The Level 6 research project process further embraces the cognitive skills.

Subject practical skills

The tutorial team has extensive professional experience and contacts and the learning resources have been developed with practical and professional relevance in mind. Skills 1-3 and 5 are developed collectively in the various coursework assignments, examinations and the multi-media learning and teaching resources.

Skill 4 is mainly developed in the Level 6 Construction Law module.

Skills 6 and 7 are in the main developed through the Level 6 research project module.

Key/Transferable skills

The Induction module sets out the importance of these skills at the beginning of the programme. The discussion of ideas and issues through the UCEM VLE forums supplemented by problem solving exercises and coursework assignments provide the means to develop the skills further.

Assessment Strategy

Knowledge and understanding

Knowledge and understanding are tested through a combination of coursework and unseen examinations. The Level 6 Project is a piece of individual research work. All summative assessment is subject to rigorous moderation policies.

Intellectual skills

The format of the coursework assignment and examination questions will include practical situations and scenarios requiring logical and critical thought, analysis and problem solving. More straightforward problems will be used at Level 4, but at Levels 5 and 6 students will be required to transfer the knowledge from previous modules and apply it to solve particular problems.

Quantitative analysis skills are developed in economics, management, measurement and quantification and estimating modules, whilst essay writing and report writing are practiced and assessed within a number of modules.

The Project and Work Based Learning Project modules develop time-management, independent research and written communication skills.

Subject practical skills

Relevant assessment of these skills is undertaken mainly through module coursework assignments and through unseen examination.

Skills 6 and 7 are also assessed through the research project.

Key/Transferable skills

Formative self-assessment such as quizzes and learning activities are used to collectively test the skills. Coursework assignments provide the main means of assessing how the introduction and development of these skills is progressing.

The Level 6 Project and Work Based Learning Project modules provide the main means to ascertain maturing in some of these areas, at depth, within a focused topic.

Assessment Diet.

The assessment for the Institution's supported online learning BSc Programmes consist of a variety of assessment modes:

- assessed coursework (in essay, report, problem or short question format),
- written examination papers,
- project submissions,
- work-based learning portfolios and other e-mediated submissions.

The exact combinations of assessment will vary across programmes and from module to module.

BSc (Hons) Quantity Surveying Programme Specification

BSc (Hons) Quantity Surveying	Assessment pattern	CATS credits per module
Level 4 (Certificate of Higher Education) 120 credits		
Stage 1	1 coursework 1 final assessment (examination or second coursework)	20
Level 5 (Diploma in Higher Education) 120 credits		
Stage 2	1 coursework 1 final assessment (examination or second coursework)	20
Level 6 (Honours Degree) 120 credits		
Stage 3	1 coursework 1 final assessment (examination or second coursework) <u>Project</u> 2 coursework assignments 1 project report <u>Work Based Learning Project</u> 1 portfolio of evidence 1 project report	20 40 40
